

CLAIMS

What is claimed is:

1. A mounting assembly for an image comprising:
 - 2 a first mounting plate;
 - 3 a spring having a first end portion secured to the first mounting plate such that the spring is substantially perpendicular with respect to the first mounting plate; and
 - 4 an image secured to the first mounting plate.
- 1 2. The mounting assembly of claim 1, further comprising a second mounting plate secured to a second end portion of the spring such that the spring is substantially perpendicular with respect to the second mounting plate.
- 1 2. The mounting assembly of claim 1, further comprising a spring mount employed to secure the spring to the first mounting plate.
- 1 2. The mounting assembly of claim 3, wherein the spring mount comprises epoxy resin.
- 1 2. The mounting assembly of claim 1, wherein the image is a photograph.
- 1 2. The mounting assembly of claim 1, further comprising a magnet secured to a second end portion of the spring such that the spring is substantially perpendicular with respect to the magnet.
- 1 2. The mounting assembly of claim 1, further comprising a button shroud secured to a second end portion of the spring.

1 8. The mounting assembly of claim 1, further comprising a snap assembly
2 secured to a second end portion of the spring.

1 9. The mounting assembly of claim 1, further comprising a suction cup
2 assembly secured to a second end portion of the spring.

1 10. The mounting assembly of claim 1, further comprising a microchip to
2 provide at least one of audio or visual output secured to a second end portion of
3 the spring.

1 11. A mounting assembly for an image comprising:
2 a cam provided within a cam housing, wherein a portion of the cam
3 projects from a first side of the cam housing;
4 a mounting plate coupled to the portion of the cam that projects from the
5 cam housing; and
6 an image secured to a second side of the cam housing.

1 12. The mounting assembly of claim 11, wherein the cam housing includes a
2 curvilinear slot located on the first side of the housing, through which the portion
3 of the cam projects.

1 13. The mounting assembly of claim 11, further comprising a pendulum that
2 couples the mounting plate to the projecting portion of the cam.

1 14. The mounting assembly of claim 13, wherein the pendulum is spring
2 biased at a pivot point of the pendulum.

1 15. A wobble head doll comprising:
2 a body; and
3 at least one image coupled to the body via at least one spring extending
4 substantially perpendicular between a vertical plane of the body and a vertical

1 plane of the image, such that the image is able to move in a clockwise and
2 counterclockwise manner when activated.

1 16. The wobble head doll of claim 15, wherein the body comprises a
2 pressboard having an image provided thereon.

1 17. The wobble head doll of claim 15, wherein the at least one image is a
2 photograph.

1 18. The wobble head doll of claim 15, further comprising a base for
2 supporting the body.

1 19. The wobble head doll of claim 18, wherein the base comprises a slot
2 provided in a top portion of the base for receiving a bottom portion of the body.

1 20. The wobble head doll of claim 18, wherein the base includes a turntable
2 portion to rotate the wobble head.

1 21. The wobble head doll of claim 20, wherein the turntable portion is at least
2 one of battery powered, solar powered, magnetic powered, electric powered,
3 microchip powered, and manually powered.

1 22. The wobble head doll of claim 15, wherein at least two images are coupled
2 to the body via two springs extending substantially perpendicular between a
3 vertical plane of the body and a vertical plane of each of the images.

1 23. A kit for creating wobble objects comprising:
2 paper for printing a desired image; and
3 a mounting assembly to secure to a back side of the image, wherein the
4 mounting assembly includes at least one mounting plate and at least one spring
5 secured to the mounting plate in a substantially perpendicular manner.

1 24. The kit of claim 23, further comprising at least one of a body or
2 background for securing the mounting assembly and image thereto.

1 25. The kit of claim 24, further comprising a base for supporting the body or
2 background.
